

33 Recordings Work on ALL Phones

This page presents the three ways you can make recordings.

First

Here, you can make a simple Tape Recorder type of call. All you do is dial the phone number "YesRecords", (937 732-6737) You will hear a slight bell and then the recording will begin. When you're done you hang up.

Second

Here, you can make a recorded call. All you do is dial the phone number, "RecordCall" (732 673-2255). You will hear a prompt that will say, enter the 10-digit phone number, that you want to call. The system will automatically, make a recorded call, to the phone number that you entered. You will be on a recorded call.

This system runs by using United States phone numbers which are reachable by every country, by adding the digits 011 to the actual phone number. This application is not an app. It is embedded into the Amazon cloud network. As a result, every phone in the world that is reachable by. As a result, almost every phone in the world can use this system. Foreign callers can reach the United States, by adding 011 to the United States number. Caller account numbers stay as they are, including the country code. All this means that there is no app, and every mobile phone and every land line can be reached. Our initial launch will be dedicated to US phones. It will be extended to global countries within one year. The carrier that we use now is Touchtone.
